DECODED × ROVIQ

> "10,000 streetwear brands have a Shopify store. None of them have a speakeasy."

Prepared for: Decoded Shop
Prepared by: Roviq — Strategy, Design & Technology
Date: February 2026
Classification: Confidential

1. THE DIAGNOSIS

We audited every layer of Decoded's digital presence — website, social, SEO, local search, paid media, competitive position, and revenue infrastructure. The findings were consistent across every dimension:

DIMENSION	GRADE	THE PROBLEM
Website & Digital Presence	**D-**	No custom domain. Zero product descriptions across 37+ SKUs. No About page. No brand story. No size guide. Default Shopify template. "Powered by Shopify" in the footer.
Social Media & Content	**D**	Instagram-only brand. No TikTok. 0.27% engagement on 20.4K followers. No content strategy.
Email / SMS / Retention	**F**	$0 revenue from email. $0 from SMS. No capture mechanism anywhere. Every customer who buys is immediately lost.
Paid Advertising	**N/A**	Nothing running. Zero paid acquisition.
Revenue Infrastructure	**Critical**	AOV ~$68. No upsells. No bundles. No abandoned cart recovery. No post-purchase flows.

The core problem isn't traffic. It's that Decoded has no way to keep the people who already care.

Every visitor who doesn't buy on their first visit disappears forever. There's no email to follow up. No push notification to announce the next drop. No community to pull them back. The business model right now is: acquire a customer at full cost, sell them one item, never speak to them again.

But here's what the audit also showed: **the brand DNA is real.** "Decoded Noir." "Hand of God." "Kingdom Has Fallen." The automotive × faith × luxury aesthetic. The two-tier pricing architecture. The 911 Turbo visual language. "806 The Show" as a cultural anchor. These aren't manufactured — they're genuine. And genuine brand identity is the one thing money can't buy.

The gap isn't identity. The gap is infrastructure.

---

2. THE VISION: THE DIGITAL SPEAKEASY

Most brands would fix the Shopify store, run some Meta ads, and call it a day.

We're not proposing that.

We're proposing that Decoded stop competing as a clothing brand and start operating as a **digital speakeasy** — an invite-only, experience-first world where the app isn't a store, it's the front door to a culture. The clothes aren't products. They're trophies you earn by being inside.

The model: MSCHF built a $200M+ brand on one principle — every time you open the app, something different happens. You never know what you'll find. That creates compulsive engagement: people open the app not to buy, but to see what's happening. The buying follows naturally.

Decoded's frequent drops are the perfect fuel for this. Most brands struggle to create enough reasons for people to open their app. Decoded's owner drops constantly — that's not a weakness, it's the engine.

What this looks like:

- A cinematic boot sequence that feels like starting a 911 Turbo
- Real games hidden inside the app — not loyalty points, actual arcade games
- 15-minute "Flash Raid" drop windows that appear without warning

- Podcast episodes that contain verbal codes unlocking hidden app content
- "The Vault Lock" — unsold inventory gets permanently pulled and vaulted, never sold again
- Quarterly subscription boxes with NFC artifacts that unlock in-app experiences
- A tiered community where the deepest levels are earned, not bought

The website becomes a clean, dark, minimal luxury storefront — think Balenciaga — that exists to drive traffic to the app. The app is where the world lives.

Nobody at Decoded's level has this. That's the point.

---

3. PHASE 1: WEBSITE TRIAGE — Weeks 1–2

The current Shopify store isn't the main play, but it can't actively embarrass the brand while we build the app. This phase is surgical: fix the critical issues, establish the luxury-minimal aesthetic, and add a clear funnel to the app.

Deliverables

ACTION	WHY	TIMELINE
Custom domain — acquire and connect `decoded.shop` or equivalent	`decodedshop.myshopify.com` signals "hobby project." A custom domain costs $15/year.	Day 1
Luxury-minimal redesign — dark theme, sparse layout, full-bleed imagery	The website should feel like walking into a high-end boutique at night. Clean. Dark. Sparse. No clutter. Think Balenciaga, not Zumiez.	Week 1
Product descriptions — all 37+ SKUs get copy (fabric, fit, story, care)	Zero descriptions across the entire catalog is the single biggest conversion killer. This alone can lift conversion 30%+.	Week 1–2
Brand story / About page	The founder's story IS the brand. Automotive roots. Faith. Why "Decoded." Why "Noir." One page. Cinematic.	Week 1
"Get the App" banner — persistent CTA driving to app download	The website's job is to be a front window. The app is the store. Every page should funnel toward the download.	Week 1
Trust layer — size guide, returns policy, social links, remove "Powered by Shopify"	Table stakes for selling $150 items online.	Week 1
Email capture — Klaviyo popup + footer form + welcome flow	Bridges the gap until the app launches. Captures visitors who aren't ready to buy yet. 30–40% of DTC revenue comes from email.	Week 2
Hide sold-out SKUs and clean up dead inventory	Removes dead-end pages that waste attention.	Day 1

What this phase is NOT: A full website rebuild. We're not redesigning the entire Shopify experience — we're applying a luxury-minimal skin, fixing critical gaps, and turning the site into an app funnel. The app is where the investment goes.

Phase 1 Cost: Included in the project scope (see Pricing).

---

4. PHASE 2: THE APP — Weeks 2–8

This is the core of the engagement. Not a mobile-optimized website in a wrapper. A world.

4.1 — Technical Architecture

Stack: Native iOS (Swift)

Randy built the AC Blacksite app in Swift — cinematic onboarding, a hidden Space Invaders game, premium native UX. Swift is his strength, and for Decoded, native iOS is the right call. Here's why:

- **Superior cinematic experience** — SpriteKit for 2D games, Core Animation for fluid transitions, native haptics. The onboarding sequence, the Vault games, the drop animations — all of this performs significantly better in native Swift than in any cross-platform framework.
- **Better game performance** — The Vault's arcade games (Midnight Run, The Confessional) need responsive, smooth gameplay. Native delivers this without compromise.
- **Apple-favored** — Apple's review team treats native apps more favorably. Smoother review, better featuring potential, cleaner integration with iOS APIs (NFC, push notifications, haptics).
- **The skillset is already there** — Randy built AC Blacksite in Swift. No ramp-up time. No learning curve. Execution starts immediately.

Why iOS-first (not both platforms)?

Decoded's target demographic — luxury streetwear buyers, "the cool crowd," $120–$150 Noir-tier consumers — skews heavily iOS. This isn't opinion; it's data:

- iOS users spend **2–3x more on premium/luxury mobile commerce** than Android users
- Streetwear's core audience (18–34, urban, culturally engaged) over-indexes on iPhone
- Supporting both platforms simultaneously doubles development complexity, testing surface, and maintenance cost — without doubling revenue
- React Native offers cross-platform convenience and OTA updates, but at the cost of native functionality. Games, cinematic animations, and haptics all take a hit. For an app where the experience is the product, that's a meaningful tradeoff.

Our recommendation: Build native iOS first. Deliver the best possible experience to the audience most likely to buy. Once the app has traction and there's demonstrated demand from Android users, an Android version can be scoped as a future expansion — either as a Kotlin native build or a React Native port.

This is a strategic choice, not a limitation. We'd rather give 100% of the right audience a world-class experience than give 100% of all audiences a compromised one.

Backend:

- Shopify Storefront API for product catalog, inventory, and checkout
- Firebase/Supabase for user profiles, game scores, membership tiers, push tokens
- Firebase Cloud Messaging (FCM) + APNs for push notifications
- Lightweight Node.js server for game logic, drop scheduling, and notification orchestration
- Hosted on Vercel or Railway

4.2 — The Cold Start: Cinematic Onboarding

When someone opens the app for the first time, they don't see a login form. They see a movie.

Screen 1 — THE IGNITION A 911 Turbo tachometer fills the screen. The needle climbs from 0 to redline. Engine audio fades in — low, throbbing, real. The Decoded logo burns into frame, letter by letter.

Text: "This isn't a store."

Screen 2 — THE WORLD Split-screen montage: Porsche in motion / Noir Strata fabric close-up / hands in prayer / city night aerial. Quick cuts. Cinematic.

Text: "This is a world. You're either in it, or you're watching."

Screen 3 — THE GATE Dark screen. A fingerprint scanner icon pulses. The user holds it until the vault unlocks — a heavy, physical-feeling interaction. Then: "Choose Your Lane."

Two paths appear:

The main line. $25–$70. Streetwear with edge.	The luxury tier. $120–$150. Elevated. Exclusive.
"I'm here for the drops."	"I'm here for the culture."

This fork immediately segments the user base, personalizes the experience from the first interaction, and validates the two-tier brand architecture in real time. If 80% choose Noir, that tells Decoded where to invest.

Screen 4 — ENTER THE CODE Dark input field. Blinking cursor. Label: "Enter your code name." Email capture below. CTA: **"DECODE."** Push notification permission triggers after entry.

4.3 — App Screens (V1)

```

└───────────────────────────────────────────────────────────┘
```

4.4 — Drop Architecture

Decoded's frequent drops are the app's heartbeat. Every drop follows a structured cadence:

THE STANDARD DROP

```
T-72 hours:  Push notification — "Something's coming. 72 hours."
             Blurred teaser on home screen hero.
             Noir Lounge: unblurred preview for VIP members.

T-1 hour:    Push notification — "1 hour. Are you ready?"
             App enters "Drop Mode" — dark theme intensifies,
             ambient sound shifts, countdown dominates.
             Live viewer count shows how many people are waiting.

T-0:         Push notification — "IT'S LIVE. GO."
             Product pages unlock. Sizes + quantities visible.
             10-minute cart timer (urgency without manipulation).

T+24 hours:  Push to non-buyers — "You missed it. [X] pieces left."
             Push to buyers — "Your drop shipped. Welcome to the code."
             If sold out — "Gone. Next one's in [X] days."
```

THE FLASH RAID No warning. Push notification hits: "THE WINDOW IS OPEN. 15 MINUTES." The app opens directly to a countdown. When it hits zero, the Buy button appears. 15 minutes later, the button detonates (animation) and the product vanishes. Miss it, it's gone.

THE VERSUS DROP Two colorways drop simultaneously. Users vote by tapping their side. After 24 hours, the loser gets locked — permanently unavailable. The winner gets sold. Forces community interaction, creates tribalism, generates organic debate content on social.

THE VAULT LOCK If a drop doesn't sell out within 48 hours, the remaining inventory gets permanently pulled and vaulted — never to be sold again. A cinematic "vault sealing" animation plays in the app as the pieces disappear from the catalog. "If you didn't grab it, it's gone forever." These vaulted pieces can resurface later as exclusive inclusions in subscription boxes, giving them a second life as collector's items. This is the ultimate scarcity mechanic — every drop feels urgent because the alternative isn't a sale, it's permanent removal.

APP-EXCLUSIVE DROPS 1–2 drops per quarter available ONLY in the app. Not on the website. Not on Instagram. When followers see "APP ONLY" on IG, they download. This is the #1 driver for installs.

4.5 — Podcast Integration: The Cross-Platform Flywheel

"806 The Show" is an untapped engagement engine. Here's how the app and podcast feed each other:

- **Verbal codes:** During episodes, the host drops a code word (e.g., "Romans 12:2"). Entering it in the app's search bar triggers an easter egg — the screen shifts, a hidden discount or exclusive product unlocks for a limited time.
- **"The Confessional" game:** Questions are drawn directly from podcast lore and biblical references in the designs. This forces app users to listen to the podcast and podcast listeners to download the app.
- **Episode drop sync:** New drops are teased at the end of podcast episodes. "If you're listening right now, the code is live in the app for the next hour."

The result: A closed loop where each platform drives the other. Podcast → App downloads. App → Podcast listens. Both → Purchases.

4.6 — Surprise Mechanics

THE NOIR FLASH SALE (replaces "The Glitch") Randomly, once per week, for exactly 10 minutes, select Noir items flash at 20–30% off inside the app. No warning. No schedule. A push notification fires: "NOIR FLASH. 10 MINUTES." Users who are in the app see it. Users

who aren't, miss it. This creates compulsive app-checking behavior without the financial and brand risk of giving product away at $0.

HIDDEN CONTENT Certain products are ONLY discoverable through exploration. They don't appear in the main shop grid. Tap the right element, enter the right code, score high enough in a game — and they appear. Rewards the obsessive fans.

4.7 — Community Tiers

TIER	ACCESS	HOW YOU GET IN
DECODED (Free)	Shop, drops, basic game, push notifications	Download the app
NOIR ($15/month or auto-unlock at $300 lifetime spend)	24-hour early access to ALL drops. Noir Lounge (exclusive content, behind-the-scenes, founder notes). Noir-only drops and colorways. Free standard shipping. Birthday drop. Quarterly founder Q&A. Discounted subscription boxes.	Subscribe or spend $300+
ELITE (Earned — top 1%)	Vote on next colorway. Input on drop names. Exclusive "Elite" product line (ultra-limited, 10–20 units). Direct founder access. Name in app credits.	Top game scorers + highest lifetime spend. Invitation only.

4.8 — App Store Submission

First-time app submissions with game mechanics and in-app purchases receive extra scrutiny from Apple. The timeline accounts for this:

- 1–2 week review cycle
- Buffer for a rejection-and-resubmission round if needed
- Required privacy policy, terms of service, and age rating
- App Store screenshots, preview video, and metadata

This is built into the Week 7–8 timeline. The app is code-complete by Week 6; Weeks 7–8 are testing, submission, and review buffer.

---

5. FUTURE EXPANSION: "THE CACHE" — Quarterly Subscription Boxes (Quarter 2+)

> This section outlines a future revenue expansion available once the app has traction. It is not part of the V1 build — it's a roadmap for where the platform goes next.

Once the app is live and building an engaged user base (200+ active users), subscription boxes become a natural next step. The app collects the waitlist from Day 1, and when demand is validated, The Cache launches as an add-on revenue stream.

5.1 — Concept

"The Cache" is not a box of clothes. It's a **physical DLC pack** for the app — a quarterly supply drop that bridges the digital speakeasy into the real world. Every box contains a physical artifact that interacts with the app, turning the unboxing into a ritual, not just a delivery.

5.2 — Tiers

DROP BOX — $65/quarter

- 1 exclusive tee or accessory (box-only design, never sold elsewhere)
- 1 mystery item from recent drops (variant or overstock)
- 1 branded artifact (sticker pack, car freshener, enamel pin with Decoded branding)
- Physical QR card → scanning in the app triggers a cinematic unboxing animation and unlocks a one-time discount code or hidden product access
- Printed lookbook/zine with upcoming drop previews

NOIR BOX — $120/quarter

- Everything in the Drop Box, PLUS:
- 1 Noir-tier item (exclusive Noir colorway or material, box-only)
- Premium packaging (matte black, foil stamp, magnetic closure)
- NFC-enabled card granting 48-hour early access to the next Noir drop
- QR code linking to a founder voice memo or video note

- Printed first-look at next season's Noir designs

ELITE CRATE — $200/quarter (invite-only)

- Everything in the Noir Box, PLUS:
- 1 limited-run numbered item (50 units max)
- 1 collab item or prototype piece
- VIP event access (virtual or local in-person)
- Direct vote on next quarter's box contents via app

5.3 — The Golden Ticket

1 in every 50 boxes — across all tiers — contains a **Black Card.** A physical metal card worth $500 in Decoded credit. This creates "Charlie and the Chocolate Factory" energy: unboxing videos become content. Social media explodes. Every box feels like it could be THE box.

5.4 — Future App Integration

When The Cache launches, the following features would be added to the app:

FEATURE	WHERE IT LIVES
"My Box" — subscription status, ship countdown, past box contents	Profile screen
QR Unboxing Experience — scan the card, trigger cinematic in-app reveal	Camera / QR scanner
Box Countdown — days until next box ships	Home screen (for subscribers)
Box Preview — blurred look at next quarter's box contents, 2 weeks before ship	Noir Lounge
Waitlist Signup — "Coming Soon: The Cache" banner + email capture	Home screen (pre-launch)
"Cache Member" Badge — visible on profile	Profile screen

App integration for The Cache will be scoped and priced separately when Decoded is ready to launch it.

5.5 — Revenue Projection

TIER	SUBSCRIBERS (CONSERVATIVE)	REVENUE/QUARTER	ANNUAL
Drop Box ($65)	100	$6,500	$26,000
Noir Box ($120)	30	$3,600	$14,400
Elite Crate ($200)	10	$2,000	$8,000
Total	**140**	**$12,100**	**$48,400**

At scale (200+ subscribers), this revenue stream reaches **$56,000+/year** — predictable, recurring, and separate from volatile drop revenue.

5.6 — Noir Member Discount

Subscription boxes are separate from Noir membership, but Noir members receive a 15% discount on any box tier. This incentivizes both subscriptions and creates a natural upsell path.

5.7 — Recommended Launch Sequence (When Ready)

1. **App launch (Week 8):** "Coming Soon: The Cache" teaser appears in-app. Waitlist signup begins.
2. **Month 2–3:** Waitlist builds. 200+ signups = green light.
3. **Month 3:** First box ships. Unboxing content floods social.
4. **Ongoing:** Quarterly cadence. Each box is designed 6 weeks in advance. Box curation and fulfillment is Decoded's responsibility (or a 3PL); Roviq handles app integration, QR/NFC experiences, and marketing.

---

6. PHASE 3: LAUNCH & GROWTH — Weeks 8–12

6.1 — App Launch Campaign

Week 1 — The Tease (pre-launch):

- Instagram Stories: daily 3-second clips of app screens. Dark. Moody. No explanation. Just "Coming."

- TikTok: 15-second cinematic trailer — engine sound, app screens flashing, game footage. Text: "Everything changes [date]."
- Podcast: "806 The Show" episode dedicated to the app. First verbal code dropped: "Download the app and enter [code] in the first 48 hours for something nobody else gets."
- Email blast to Klaviyo list: "You're getting early access. No one else." — App Store link 24 hours before public.

Week 2 — The Drop:

- Launch day: simultaneous app-exclusive drop. First product in the app is available NOWHERE ELSE.
- Instagram Reel: screen-record of the full onboarding experience. Authentic. Real.
- Live download counter on IG Stories: "[X] people are in. Are you?"
- Push notification to all Day 1 users: "The first drop is live. You're the first to see it."

Target: 300–600 installs in Month 1 (1.5–3% of 20K IG followers — conservative, industry-benchmarked). At 500 installs with 15–25% install-to-purchase conversion, that's 75–125 first-month orders through the app.

6.2 — Instagram → App Funnel

The Instagram account (20.4K followers) becomes an app-install machine:

TACTIC	MECHANIC
Bio link	Swap Shopify link for app download link. The app IS the store now.
"APP ONLY" drops	Post product teasers on IG with "APP ONLY" watermark. Curiosity drives downloads.
Vault leaderboard screenshots	"Top scorer this week wins a free Noir piece. Play in the app." Competitive energy drives installs.
Hidden codes in IG content	Hide a 4-digit code in an Instagram post image. Enter it in the app for a surprise. Cross-platform engagement.
Driver's License shares	Game scorecard graphics designed for IG Stories. Users share their scores, others see the app. Organic discovery loop.
Every Story ends with the app CTA	Consistency compounds.

6.3 — TikTok Launch

- Secure `@decoded.shop` or `@decodednoir`
- Content pillars: (1) Cinematic product clips — Noir aesthetic, night drives, moody lighting. (2) "I found a secret store" — showing hidden app features. (3) Drop teasers — mystery, blurred reveals, countdowns. (4) Unboxing content when subscription boxes launch.
- Format: dark, moody, 7–15 second loops. Bass-heavy audio. Minimal text.
- Goal: discovery, not direct sales. Find the audience that will download the app.

6.4 — Paid Acquisition (Month 3+)

Not before the app proves it converts. Once baseline metrics are established:

CHANNEL	MONTHLY BUDGET	CREATIVE
Meta (IG/FB) App Install Ads	$1,500	Cinematic 15s app trailer. Audience: 18–34, streetwear + car culture interests, Boston metro + national.
TikTok App Install Ads	$750	UGC-style: "I found a hidden game inside a streetwear app."
Retargeting	$500	Website visitors who didn't buy → app install CTA. IG engagers → app install CTA.

Expected CPI: $2–$5. At $68 AOV and 15–25% install-to-purchase rate, break-even happens on the first order.

6.5 — Contingency: Slower Adoption

If installs are lower than projected:

- Double down on podcast integration (free, high-conversion channel)
- Run a "founding member" campaign: first 200 app users get permanent Elite-tier pricing on subscription boxes
- Increase app-exclusive drop frequency to force IG followers into the app
- Reallocate paid budget from awareness to retargeting warm audiences
- Consider a strategic collab with a Boston-area artist or car culture figure (10K–50K followers) for a co-branded app-exclusive drop

200 engaged users with high LTV is better than 2,000 passive downloads. The model works at smaller scale — it just takes longer to compound.

---

7. PHASE 4: LONG-TERM VISION — Month 3+

7.1 — App as Primary Sales Channel

By Month 6, the target:

- **60% of revenue through the app** (vs. website)
- Website becomes the "front window" — exists for SEO and Google discovery
- Instagram becomes the megaphone — drives awareness; app drives conversion and retention

7.2 — Data-Driven Drops

The app generates intelligence the website never could:

DATA POINT	STRATEGIC USE
Push notification open rates by product category	Know which drops generate excitement BEFORE producing
Game engagement by time of day	Schedule drops for peak engagement windows
Noir Lounge vs. free tier purchase rates	Quantify revenue lift of VIP tier
"Choose Your Lane" onboarding split	Real-time market signal on where to invest
Product page views that don't convert	Identify pricing or sizing issues instantly
Referral code tracking	Know exactly which customers bring in new customers
App open frequency per user	Identify at-risk users for re-engagement pushes

7.3 — Expanding the Experience

FEATURE	TIMELINE	INVESTMENT
Vault Game Season 2 (new mechanic, new rewards)	Quarter 2	$2,000
Android version (based on client demand)	Quarter 2–3	$4,000–$6,000
NFC-enabled physical "Black Card" artifacts for Elite tier	Quarter 3	$1,500
AR virtual try-on	Month 6+	$3,000
Community challenges ("Decoded Days" — collective goals)	Quarter 2	Included in retainer

7.4 — The Moat

Long-term, the app becomes the thing competitors can't replicate:

- **Switching cost:** Game scores, Noir status, earned rewards, referral networks, purchase history — moving to another brand means starting from zero.
- **Network effect:** More users = better leaderboards = more competition = more engagement.
- **Content lock-in:** Behind-the-scenes content, founder Q&As, Noir exclusives — exists nowhere else.
- **Identity:** "I'm Decoded Elite" becomes part of how a customer sees themselves. That's a moat no competitor can buy.

---

8. CONTENT CREATION RESPONSIBILITIES

Clear delineation — no ambiguity:

CONTENT TYPE	WHO CREATES IT	WHO MANAGES IT
Product photography / drop imagery	**Decoded** (owner shoots)	Roviq formats for app
Product descriptions + copy	**Roviq** (V1 website + app)	Decoded updates ongoing
Push notification copy	**Roviq**	Roviq sends
App hero images per drop	**Roviq** designs, using Decoded's product photos	Roviq updates
Noir Lounge content (BTS, founder notes)	**Decoded** creates raw content	Roviq curates and publishes
Podcast verbal codes	**Decoded** drops the code on-air	Roviq programs the unlock in-app
Social media posts (IG/TikTok)	**Decoded** films; Roviq provides templates + strategy	Roviq advises; Decoded posts
Subscription box curation + fulfillment (future)	**Decoded** (or 3PL)	Roviq handles app integration when launched
Game design + updates	**Roviq**	Roviq maintains

9. PRICING

No ranges. Firm numbers.

V1 BUILD — $8,500 (One-Time)

COMPONENT	WHAT'S INCLUDED
Website Triage	Custom domain, luxury-minimal theme, product descriptions for all SKUs, About/brand story page, size guide, returns policy, email capture (Klaviyo), "Get the App" funnel
Cinematic Onboarding	Tachometer boot sequence, "Hold to Unlock" gate, "Choose Your Lane" fork, code name entry, push notification opt-in
Home Screen	Dynamic hero, drop countdown, hidden Vault entry
Drop Zone	Live drops with timers, Flash Raid support, Versus Drop mechanic, Noir early access gating, real-time stock display
The Vault	"Midnight Run" 2D sprite racer + "The Confessional" podcast puzzle game. Global leaderboard. Driver's License scorecard generator.
Shop	Full Shopify catalog sync via Storefront API. Product pages. Cart. Checkout. Real-time inventory sync.
Noir Lounge	VIP content section. Noir-only drops. Tier display.
Profile / My Decoded	Order history. Tier + status. Game stats. Referral code. Notification preferences.
Push Notification System	Drop alerts (72h → 1h → live → post-drop cadence). Flash Raid alerts. Noir Flash Sale alerts. Segmented by tier.
Backend	Firebase/Supabase for user data, game scores, memberships. Node.js for game logic and notification orchestration.
App Store Submission	iOS App Store. Screenshots, metadata, privacy policy, review cycle buffer.

Payment terms: 50% upfront ($4,250) / 50% on App Store submission ($4,250).

Timeline: 8 weeks from kickoff to App Store submission.

WEEK	MILESTONE
1	Project setup. Shopify API integration. Navigation skeleton. Website triage begins.
2	Onboarding screens (motion + design). Home screen. Countdown components. Website triage complete.
3	Shop screens (product list, detail, cart). Shopify checkout integration.
4	Drop Zone. Push notification setup (FCM + APNs). Notification triggers.
5	Midnight Run game (2D sprites + scoring + leaderboard).
6	The Confessional game. Noir Lounge. Profile. Polish.
7	Testing on device. App Store asset creation. Submission.
8	App Store review buffer. Bug fixes. Potential resubmission.

MONTHLY RETAINER — $2,500/month

DELIVERABLE	DETAILS
Drop Campaign Management	Full push notification sequences for every drop (standard, Noir, Flash Raid, Versus). Campaign templates executed.
Push Notification Strategy	Copywriting, segmentation, scheduling, A/B testing. 8–12 pushes/ month.
App Content Updates	Home screen hero updates per drop. Noir Lounge content publishing (2–4 pieces/month). Drop Zone management.
Game Management	Leaderboard monitoring. Reward fulfillment coordination. Quarterly rotation planning.
Podcast Sync	Programming verbal code unlocks for each "806 The Show" episode.
Analytics & Reporting	Monthly report: installs, DAU/MAU, push performance, conversion by drop, game engagement, Noir growth.
Social Strategy	Content calendar tied to app + drop schedule. Templates and copy for 3–4 IG posts/week. TikTok content direction.
App Maintenance	Bug fixes, minor feature additions, Shopify sync maintenance, OS update compatibility.
Monthly Strategy Call	30-minute call. Review metrics, plan next month's drops, discuss roadmap.

Minimum commitment: 3 months. Month-to-month after that.

Scaling model: If Decoded's monthly revenue exceeds $30K, retainer increases to $3,500/month to match expanded scope (more drops, more content, paid ad management included). This keeps Roviq invested in growth — we only charge more when we've helped generate more.

TOTAL YEAR 1 INVESTMENT

ITEM	COST
V1 App Build	$8,500
Monthly Retainer (12 months)	$30,000
Total	**$38,500**

Subscription box app integration ("The Cache") is available as a future expansion once the app has traction. Pricing will be scoped separately when Decoded is ready to launch it.

Projected Year 1 revenue generated:

- Email/SMS flows (basic Klaviyo): $15,000–$30,000
- App-driven sales (push notifications + drop urgency): $40,000–$80,000
- Noir membership revenue: $5,400+ (30 members × $15/month × 12)
- Subscription box revenue (if launched Q2+): $48,000+ potential
- **Conservative total: $60,000–$115,000 in directly attributable revenue (excluding subscription boxes)**
- **With subscription boxes (Q2+ launch): $108,000–$163,000+**

The investment pays for itself within the first two quarters — before subscription boxes even enter the picture.

---

10. WHY ROVIQ

We've built this before.

Randy built the **AC Blacksite app** — a cinematic, gamified iOS experience featuring:

- Hidden Space Invaders game embedded inside the app
- Full cinematic onboarding flow with custom animation

- Premium home screen and event view
- Native Swift, top-of-the-line UX

The Decoded app we're proposing is the same philosophy applied to a different brand. This isn't a concept from a team that's never shipped. It's a proven playbook.

Culture fit matters.

Roviq isn't a generic dev shop. We understand why MSCHF works. We understand why Corteiz does scavenger hunts. We understand why Hellstar's founder story is more valuable than their product line. We understand that streetwear isn't about clothes — it's about identity, scarcity, and belonging. The Decoded app isn't a shopping cart with a game bolted on. It's a world built on those principles.

One team. No handoffs.

Most agencies give you one of three things: a creative team that can't code, a dev shop with no brand sense, or a marketing firm that doesn't understand product. Roviq is strategy, design, and technology in one team. We design the experience, build the app, launch the campaigns, read the analytics, and iterate. One partner. One vision.

We succeed when Decoded succeeds.

The retainer model means we're in the war room for every drop, optimizing every push notification, watching every metric. When the app drives its first $50K quarter, that's our win too. The performance-based retainer scaling ensures our incentives are permanently aligned.

---

11. LEGAL & COMPLIANCE NOTES

Items we'll handle as part of the build:

- **Privacy policy** for data collection, push notifications, and analytics
- **Terms of service** for the app
- **App Store compliance** — game reward mechanics structured to avoid gambling classification (discount codes, not cash prizes; no purchase required to play)
- **FTC compliance** for promotional mechanics (Flash Sales, Golden Ticket disclosures)
- **Subscription auto-renewal disclosures** for Noir membership (required by Apple and Google)

- **Noir membership refund policy** — clear terms before launch

---

12. NEXT STEPS

One action: Schedule a 30-minute call to walk through this proposal, answer questions, and align on Phase 1 kickoff.

Upon agreement:

1. Roviq sends SOW + invoice for 50% deposit ($4,250)
2. Website triage begins Day 1
3. App development begins Day 3
4. First milestone check-in: end of Week 2

10,000 streetwear brands have a Shopify store. Nobody has a speakeasy. Let's build yours.

Roviq — Strategy. Design. Technology.
