Roviq × Delivered: A Strategic Partnership Proposal

Confidential — For Discussion Purposes Only February 2026

1. The Opportunity

Your website is compromised right now. Casino spam pages are indexed in Google under your domain. Your SEO authority is bleeding daily, customer data may be exposed, and a cannabis licensee hosting gambling content creates compliance liability. We can fix this immediately — this week — regardless of whether we move forward on anything else in this document.

That's the fire. Here's the bigger picture.

Massachusetts cannabis generated **$1.6 billion** in 2025. Delivery captured just **$20.4 million** — 1.27% of the market. In mature states like California, delivery is 10-15% of sales. Even a modest shift to 3-4% penetration means a **$48-64M delivery market** — and the CCC is actively researching allowing delivery into the 180+ towns that currently ban all cannabis retail. If that passes, the addressable market roughly doubles.

Here's what makes this moment rare:

- **Not a single delivery operator in Massachusetts has a mobile app.** Not Zyp Run ($2.6M funded). Not Rolling Releaf. Nobody. In every other delivery category — food, grocery, pharmacy — the app is the primary channel. Cannabis delivery is stuck in a browser-only era.
- **Social equity delivery exclusivity is locked until April 2029.** The CCC voted 4-0 to maintain it. The 27 active operators today are the only ones who will exist for 3+ more years. Market share gained now is defensible for years.
- **Your license expires March 5, 2026.** That's roughly three weeks from now. We want to help with renewal preparation immediately — compliance audit, documentation support, whatever's needed. This is table-stakes goodwill, not a negotiating chip.

The window for first-mover advantage is open. But Zyp Run has $2.6M and a dev team. It won't stay open forever.

2. What Delivered Has Built

Before we propose anything, we want to acknowledge what you've already done — and that **you approached Roviq** about this partnership. That matters. This isn't a cold pitch; it's a structured response to your request.

Ruben, Eddy, and Tut have built a **real, operating business** — bootstrapped, over 2.5 years, covering ~30 towns in Central Massachusetts. You navigated the CCC licensing process, earned social equity status, built a warehouse-model operation (which captures 79% of delivery revenue vs. courier models), and established customer relationships across Worcester, Leominster, Fitchburg, and beyond.

That's not nothing. That's the hard part.

Social equity isn't just a business advantage — it represents a personal journey through a system that locked people out. We respect that. Roviq's role is to bring technology, growth infrastructure, and supply chain relationships that help you scale what you've already proven works.

You don't need saving. You need a partner.

---

3. The App: First Cannabis Delivery App in Massachusetts

React Native — iOS + Android from Day One

This is a delivery utility app, not a cinematic brand experience. **React Native** gives us both platforms simultaneously, eliminates the Android gap (Android exceeds 50% in urban/working-class demographics), and keeps development focused.

The architecture is clean: the Delivered app is the frontend. Blaze POS is the backend. Menu/inventory syncs via Blaze's open API (`apidocs.blaze.me`) in real-time. Order placement, payment processing, and delivery tracking all flow through Blaze — which already handles dispatch with route optimization, driver mobile tools (navigation, in-app chat, digital cash drawer, ID verification, signatures), and manifest compliance. We don't build those systems from scratch. We build the customer experience on top of them. This de-risks the technical build significantly.

Core Features (V1 MVP)

- **Ordering**: Full product catalog synced via Blaze API, smart search (strain, THC%, price, effects), favorites, cart with real-time inventory verification

- **Real-time tracking**: Live driver location pulled from Blaze's driver app, dynamic ETA, "5 minutes away" alerts, delivery confirmation
- **Push notifications**: Order status, flash sales, restock alerts, loyalty milestones — $0.00 per send vs. $0.01-0.05 per SMS
- **Loyalty program**: Points per dollar, 3-tier progression (Silver → Gold → Platinum), referral bonuses (give $10, get $10), birthday rewards
- **Payment**: ACH, PIN-debit, and cash via Blaze's integrated payment processing. No credit cards — cannabis can't use them. The app solves the friction of compliant payment with a clean UX.

MA Delivery Compliance (935 CMR 500)

The app isn't just convenient — it enforces compliance at every step:

- **Pre-verification**: First-time customers complete ID verification during account creation (stored encrypted, opt-in)
- **Door delivery**: ID scanned at the door — must match pre-verified customer. Customer must be physically present per 935 CMR 500 (no roommate/concierge/neighbor handoffs)
- **Residence only**: Delivery to private residences only — no hotels, dorms, public housing, or shelters
- **Manifests**: Every route generates a manifest tracked through Blaze, with real-time driver position logging
- **Municipal hours**: Delivery window enforcement varies by municipality — the app auto-enforces per zone
- **Purchase limits**: Automatic enforcement of per-customer, per-day limits

All integrated with Blaze's backend: ID verification photos, digital signatures, manifest tracking, and delivery confirmation flow through one system.

12-Week MVP Timeline

WEEKS	PHASE	DELIVERABLES
1-3	Foundation	Requirements, UX wireframes, API architecture, Blaze API integration plan
4-7	Core Build	Ordering flow, Blaze payment integration, inventory sync, checkout
8-10	Compliance + Tracking	ID verification flow, purchase limits, driver tracking via Blaze, ETA system
11-12	QA + Submission	Testing, edge cases, App Store submission (cannabis apps face extra scrutiny — we plan for 2-4 weeks of review/resubmission)

V2 roadmap (Month 5+): Advanced personalization, dynamic zone pricing, AI-powered reorder recommendations, multi-warehouse logistics via Blaze's multi-location support.

App Store risk mitigation: Cannabis delivery apps are permissible with proper age-gating. We submit a shell app with geo-fencing logic early to test Apple's current stance. Fallback: Progressive Web App as interim if approval delays occur.

---

4. The Brand Vision: "Cannabis, Delivered."

Category Ownership

"Delivered" is an accidentally perfect name — generic enough to own the category (like Band-Aid, Uber), specific enough to trademark in cannabis, and verb-ready: "I'll get it Delivered." The goal: within 24 months, "Delivered" means cannabis delivery in Massachusetts.

The Aesthetic: "Midnight Cannabis Lounge"

Premium from day one. Deep charcoal, matte gold, soft sage. Not medical-sterile, not stoner-cliché. Think Brooklyn cocktail bar meets Massachusetts craft cannabis. This isn't aspirational — it's the launch standard. The rebrand is the partnership deliverable.

Brand voice — confident, warm, adult:

DON'T SAY	SAY INSTEAD
"Your order has been processed"	"Fire's rolling your way 🔥"
"Delivery in 45-60 minutes"	"Arriving by 4:20 — give or take"
"Select your strain"	"What energy are you chasing?"

The Multilingual Play

Central MA has significant Spanish and Portuguese-speaking populations. No cannabis company targets them. "Cannabis, Entregado." / "Cannabis, Entregue." — bilingual content, support, and in-app language options from launch.

MA Advertising Compliance (935 CMR 500.105)

Every creative tactic runs through compliance:

- No outdoor advertising visible from a public way (no billboards)
- No imagery depicting cannabis consumption
- All digital ads require age-gating and health warnings
- No claims attractive to persons under 21
- Social media strategy adapted for algorithmic suppression of cannabis content — organic reach is limited, so owned channels (app, SMS, email) are the priority

---

5. The Growth Engine

Programmatic SEO

Rolling Releaf dominates Boston search rankings with 235 Instagram followers. Their secret: SERPCOM's programmatic local pages targeting "cannabis delivery in [town]" for dozens of municipalities. We build the same system — better:

- Auto-generated optimized landing pages for every town Delivered serves
- Each page: local delivery info, times, curated menu, compliance details, structured data
- New town = new page goes live automatically
- 200+ potential target municipalities. Even 50-100 page-one rankings = **$5,000-15,000/month equivalent in paid search value**

Content + Community

- **Blog**: Strain education, local spotlights, social equity advocacy — weekly cadence, SEO-optimized
- **Social**: Shift from generic "flower in a jar" to brand-forward content. Targets: 2,500 followers at 90 days, 5,000 at 6 months, 10,000+ at 12 months (requires paid amplification given cannabis content suppression)
- **SMS/Email**: Capture starts Day 1. Post-checkout opt-in, landing pages, in-app enrollment. Target: 500 subscribers in Month 1, 2,000+ by Month 6

Zone Expansion Playbook (Repeatable GTM)

Every new town follows the same sequence:

1. **Pre-launch**: Programmatic SEO page live, geo-targeted social ads, waitlist landing page
2. **Launch day**: App "unlocks" for the zone, first-order promotion, local press outreach ("Social equity business expands to [Town]")
3. **Stabilization** (Weeks 1-4): Review campaign, second-order incentive, community integration
4. **Ongoing**: Weekly zone specials, local partnerships, loyalty program deepening

---

6. The Vertical Integration Play

This is what separates a partnership from a dev contract. No app agency can offer this.

Advanced Cultivators (AC) — Confirmed Relationship

Randy works with AC, a licensed cultivator in Lowell with a prerolls manufacturing license. This is an active working relationship. The play:

- **"The Delivered Collection"** — house-brand prerolls and flower, manufactured by AC under Delivered's branding, sold exclusively through the app
- **Product line**: "The Commuter" (sativa 5-pack), "The Night Shift" (heavy indica), "The Weekender" (hybrid blend)
- **Margin expansion**: Currently ~15% margins as courier. House-brand products push margins to **35%+** by capturing wholesale markup

House of Pride (HOP)

HOP products available as app-exclusive offerings — a purpose-driven, LGBTQ+-owned brand that adds mission alignment and product differentiation.

The Flywheel

Exclusive products drive app downloads → higher retention → more volume justifies more exclusives → more downloads. A structural advantage no competitor can replicate without their own cultivator relationship.

---

7. Revenue Projections

Important note: We're estimating baseline revenue from CCC market data (~$20.4M across 27 operators). You know your actual numbers — we'd rather be honest about what we don't know than pretend we do.

Three Scenarios

Baseline range: $40,000–65,000/month current revenue (Central MA positioning suggests below the $63K/operator average)

	CONSERVATIVE	BASE	OPTIMISTIC
Assumptions	Slow app adoption, SEO recovery takes 6+ months, Boston expansion delayed	Moderate app traction, SEO recovers in 3-4 months, Boston launches Month 6	Strong app adoption, SEO recovers quickly, Boston launches Month 5
Month 6 Revenue	$65,000	$85,000	$110,000
Month 12 Revenue	$95,000	$140,000	$200,000
12-Month ARR	$1.14M	$1.68M	$2.4M
App Downloads (12 mo)	1,500	3,000	5,000+

Even the conservative scenario represents meaningful growth. **"Even if we're half right, the partnership math works."**

What Makes This VC-Fundable

By Month 10-12: the only mobile app in MA cannabis delivery, proprietary customer data, exclusive 35%+ margin products, regulatory moat until 2029, multi-zone operations. That's a **Seed round** story — $1-3M to fund statewide expansion. Zyp Run raised $2.6M with none of these advantages.

---

8. Partnership Structure

Guiding Principles

- Both parties make more when the business grows
- IP ownership is clean: **Delivered pays, Delivered owns the app. Randy owns his equity percentage in the venture.**
- Milestone-based progression protects both sides
- Structure stays clean for future investors

Option A: "The Co-Founder Track" (Recommended)

COMPONENT	TERMS
Upfront	$5,000 (covers Month 1: hack cleanup, security, SEO audit, license renewal support)
Equity	8-12% of The Delivered Inc
Vesting	4 years, 1-year cliff. Cliff milestone: app approved and processing live orders
Revenue Share	5% of gross revenue above $75K/month
Retainer	$0 for first 6 months; $2,500/month starting Month 7 (offset against rev share)

Why this works for Delivered: $5K upfront, no retainer for 6 months. Revenue share only kicks in after growth. If Randy disappears after 6 months, he retains only ~1.5-3%.

Why this works for Randy: Equity reflects $100K+ in contributed value. Revenue share scales with success.

Option B: "Growth Engine" (More Cash, Less Equity)

$15,000 upfront, 4-6% equity (3yr vest, 6-month cliff), 8% rev share on app-driven revenue, $3,000/month retainer starting Month 2.

Dissolution Terms (Both Options)

Vested equity is permanent. Delivered owns the app and all customer data — period. Revenue share survives 24 months on systems Randy built. Clean exit: they keep the app, Randy keeps vested equity.

---

9. Why Partnership, Not a Dev Shop

This is the question every founder should ask: "Why give equity when we could just hire developers?"

You came to us. That says something. A dev shop builds an app and leaves. When something breaks at 2 AM, you're calling support. When Apple changes their guidelines, you're opening a ticket.

A partnership builds and grows with you. The app is maybe 20% of the value here. The other 80%:

- **Supply chain**: AC wholesale relationship means house-brand products at 35%+ margins. No dev shop brings you a cultivator.
- **Growth engine**: Programmatic SEO, content strategy, zone expansion — running 24/7 via AI-powered operations.
- **Aligned incentives**: Revenue share means we only make money when you make money.
- **Data strategy**: Customer behavior intelligence that compounds over time — the foundation of your VC pitch.

$100K to an agency gets you an app. A strategic partner brings the app + cultivator relationships + SEO infrastructure + AI operations — and only gets paid meaningfully when revenue grows.

---

10. Growth Roadmap & Scaling Playbook

Phase 1: Emergency (Weeks 1-2)

- Hack cleanup + WordPress security hardening
- Google Search Console: spam URL removal requests, clean sitemap submission
- License renewal support — compliance audit, documentation assistance
- SEO triage: technical audit, baseline metrics
- Email/SMS capture implementation (target: 500 subscribers Month 1)

Phase 2: Build (Weeks 3-12)

- App development (12-week MVP, Blaze API integration)
- Brand identity system: visual design, voice guidelines, templates
- Programmatic SEO: pages for all ~30 current towns
- AC partnership formalized: wholesale pricing, initial SKUs, "Delivered Collection" branding
- Beta testing with 20-30 existing customers

Phase 3: Launch (Months 4-6)

- App launch (iOS + Android simultaneously via React Native)
- Launch campaign: push to email/SMS list, social blitz, in-bag flyers, referral program (give $10, get $10)
- First-order app promotion: free delivery on first app order
- "Delivered Collection" products go live (app-exclusive for first 30 days)
- Boston expansion preparation: programmatic SEO pages, driver recruitment

Phase 4: Scale (Months 6-12)

- Boston market launch + additional zone expansions
- Statewide programmatic SEO buildout (100+ municipality pages)
- Seed round preparation: investor deck, financial model, growth metrics packaging
- Expanded exclusive product line with AC
- Target: 80+ active municipalities, 3,000+ app downloads

Scaling: What It Actually Takes

Digital Scaling (Cheap, Fast — No New License)

Delivered's license (MD1303) covers statewide delivery. Expanding to new zones is a digital operation:

- Coverage zone expansion: any municipality allowing adult-use retail
- Programmatic SEO page per zone goes live automatically
- No new license for new zones — only CCC amendments for new warehouse locations
- Cost: near-zero per new zone

Physical Scaling (The Real Bottleneck)

Warehouses:

- Current: 1 warehouse (Clinton, 75 Green St) — serves ~60 min delivery radius efficiently
- Boston/Western MA/Cape each need additional warehouses
- New warehouse = CCC location amendment on existing license (not a new license application)
- Cost: $3-8K/month lease + security buildout (cameras, vault, access control per 935 CMR 500)

Vehicles:

- Must be unmarked — no cannabis branding per 935 CMR 500
- GPS tracking and real-time manifests required
- Cannabis transport insurance = higher premiums
- ~$500-800/month per vehicle all-in

Drivers:

- Must complete CCC Delivery Core Curriculum before first delivery
- Background checks + CCC agent registration required
- Body cameras, ID verification photos, digital signatures per 935 CMR 500
- One order per consumer per trip per day
- ~$18-25/hour + benefits in MA

Scaling Phases

- **Phase 1 (Months 1-6)**: Densify Central MA — expand from ~30 to 50-60 towns with existing infrastructure. Digital only, no new ops costs.

- **Phase 2 (Months 6-9)**: Hub to Boston — second warehouse (metro west), 2-3 new drivers. Cost: ~$11-16K/month additional.
- **Phase 3 (Months 9-18)**: Statewide network with VC capital — 3-4 warehouses, 10-15 drivers, $40-60K/month ops burn, $200K+/month revenue target.

The license IS the moat. Scaling is operational, not regulatory. The real limiter is capital for warehouses + drivers — that's what the Seed round funds.

---

11. Risk Mitigation

App adoption is slow? Programmatic SEO, email/SMS, and AC supply chain drive value independently. Revenue share under Option A is on total revenue, not app-only.

Apple/Google reject the app? Cannabis delivery apps are permissible with proper age-gating. We submit a shell app early to test. Fallback: Progressive Web App provides 80% of functionality.

Blaze API limitations? Blaze has an open developer partner network and documented API at `apidocs.blaze.me`. We apply for BPN access in Week 1, prototype integration in Weeks 2-3 to confirm before the full build. Risk is low — they already serve MA operators.

Statewide expansion takes longer? Expansion is digital-first — SEO pages cost near-zero. Central MA can deepen significantly before Boston launches.

Partnership dissolves? Delivered keeps the app and all customer data. Randy keeps vested equity. Revenue share survives 24 months. Delivered owns what they paid for.

---

12. Next Steps

1. **This week**: Meeting with Ruben, Eddy, and Tut to walk through this proposal and hear your questions
2. **Immediately**: Confirm license renewal status (March 5 deadline). We can assist with compliance prep right now — no commitment required
3. **Immediately**: Site security audit and hack cleanup can begin this week, before any partnership terms are finalized. Your house is on fire; let's put it out.
4. **Week 2-3**: If there's mutual interest, draft Letter of Intent reflecting agreed terms
5. **Week 3-4**: LOI signed, Phase 1 work begins

You came to us because you know the combination of your operations + our technology, growth infrastructure, and supply chain relationships creates something neither of us can build alone. You've built a working business in a protected market with a name that could own the category. Let's make it happen.

Let's talk.

— Randy Torres, Roviq
